Prerequisites

NURS 1050 is a Prerequisite for:

Course No. Course Name Course No. **Course Name**

None.

NURS 3032 Family Nursing Theory

NURS 3034 NURS 3036

Nursing of Families Practicum Mental Health Issues in Nursing Practice

NURS 3038

Mental Health Nursing Practicum

Course Calendar Description

In this introductory course students will study how various aspects of interpersonal communication promote shared meaning with patient/clients and others. The course emphasizes attitudes, knowledge and skills necessary for helpful communication. Simulated patients, student demonstrations of their communication abilities, interactive exercises and class activities are part of the course.

Course Goals

Interpersonal Communication helps students develop the ability to establish partnerships with people by developing shared meaning.

Evaluation

- Participation in class and activities: Participation is demonstrated through the creation of a collage, discussion of course readings and activities, and participation in the patient simulations. An additional 5% bonus marks are available for interacting with simulated patients. See comments under Participation.
- An essay in which the student describes and analyzes interactions in order to demonstrate her/his understanding of interpersonal communication theory in action.
- A midterm examination that tests the student's understanding of the course textbook, Everyday encounters.

Students will participate in deciding the percentage of marks assigned to the essay and the midterm examination. If any one of the assignments is not completed, the student will not achieve a passing grade. The student must achieve at least a passing grade in either the midterm examination or the essay in order to pass the course.

Course Learning Outcomes/Competencies

The student will:

- 1. Develop interpersonal awareness in order to identify the:
 - context of an interaction (physical, emotional, social, cultural, economic, political and spiritual).
 - verbal and non-verbal attitudes and skills that facilitate shared meaning.
 - verbal and non-verbal attitudes and behaviors that block shared meaning.
- 2. Develop interpersonal self-awareness in order to identify her or his own:
 - contextual variables in a given interaction.
 - verbal and non-verbal attitudes and skills that facilitate shared meaning.
 - verbal and non-verbal attitudes and behaviors that block shared meaning.
- 3. Incorporate professional interpersonal skills with her/his personal way of being.
- 4. Demonstrate professional, caring communication during course activities.
- 5. Explain and commit to the essential nature of communication to professional nursing.

Process Threads Relevant to this Course

Professionalism: Students develop an understanding of the professional nurse's role regarding communication. They use assessment knowledge to guide interpersonal communication and use judgment when communicating. They adhere to professional ethical standards.

Communication: Students thoughtfully discuss interpersonal communication verbally and in writing. They dialogue with colleagues and teachers in the process of learning. They work with colleagues and simulated patients to develop abilities in interpersonal communication. They commit to the essential nature of communication in professional nursing. Students anticipate interpersonal communication to be performed in class and prepare themselves to perform them. They are independent with some aspects of interpersonal communication learned this term, but may require assistance with others.

Systematic Inquiry: Students think and reflect about interpersonal communication by appreciating the research base, recognizing real and potential risks associated with communication and making judgments about communication considering the context. Questioning and feedback are two of the strategies that are used to facilitate reasoning and reflection.

Professional Growth: Students take responsibility for their learning and for preparing information for class that is accurate and relevant. Also, they are responsible and accountable for their actions. As students participate in the course experiences, they will grow both personally and professionally.

Creative Leadership: Students are able to discriminate situations in which specific skills would be useful. Developing interpersonal awareness of self and others requires creativity and risk-taking. Students are expected to make positive assumptions about each other's abilities and value individuality. Self-direction and dialogue are essential to partnership.

Course Content Verification

I verify that the content of this course outline is current, acc	curate and complies with BCIT Policy.

Learning Resources

Required:

Callahan, M., & Kelley, P. (1992). Final gifts. New York: Bantam.

Haber, J. (1997). Therapeutic communication. In J. Haber, B. Krainovich-Miller, A.L. McMahon, & P. Price-Hoskins, *Comprehensive psychiatric nursing* (5th ed., pp. 121–142). St. Louis: Mosby. On Reserve. (Call No. B828)

Wood, J., Sept, R., & Duncan, J. (1998). Everyday encounters. An introduction to interpersonal communication. Scarborough, ON: ITP Nelson.

BCIT Policy Information for Students

- 1. Students are encouraged to identify individual learning needs that may be met in this course. Please talk with the teacher to see how this might be accomplished.
- 2. During the first class, the evaluation methods will be discussed and the percentage of marks assigned to each one will be identified.
- 3. The reference readings are on reserve in the library. The loan period (1 day; 2 days, etc.) will be discussed and determined during the first class. Currently it is 2 days.
- 4. Students will participate in a verbal review of the course at midterm and the end of the term. Students may also raise concerns about the course during any class. This review will include a discussion of teaching methods, resources and course structure. The midterm review is aimed at meeting the needs of the students currently taking the course. The end of term review is aimed at modifying the course for the next class.
- 5. Harassment and Discrimination, Conduct and Attendance: It is the student's responsibility to read the Institute's guidelines and commitment to an environment free from harassment and discrimination in the current BCIT Calendar and to behave accordingly.

Participation/Attendance

15%

Participation is required in this course because of the importance of dialogue to thinking, self-awareness and learning. The different viewpoints shared during the class will help expand the thinking of all participants. Everyone's comments deserve and will receive respectful hearings.

The instructor will assign you randomly to a small group for in-class discussion. You may want to meet with your group outside of class to share readings. However, each student needs to be very familiar with the course readings in order to be successful in the midterm examination and the essay.

Your learning is directly related to the effort you put into the reading and class activities. Therefore, class participation in NURS 1050 counts for a percentage of your final grade. *Participation includes doing the reading and writing preparation for class and talking actively in the group.* Sometimes, you will be called upon to share your group's discussions with the larger class so be prepared to do this. If you have trouble participating in class or are uncomfortable doing so, please get assistance from the instructor and group members. The instructor will monitor your preparation and participation.

Another focus for discussion is the informal debriefing and analyzing of interpersonal interactions that occur in your practicum from week to week. Sharing these experiences will help you to understand the course material. It is also good preparation for writing the course essay.

Students are strongly encouraged to interact with the simulated patients. Students who make a genuine attempt to interact in a helpful and skillful way with the patient will receive 5% bonus marks.

Take responsibility for your own learning by asking the instructor, during office hours, to:

- clarify and expand on ideas from class.
- suggest additional readings.
- discuss upcoming assignments.
- provide detailed feedback on assignments or progress.

If students are absent for more than 10% (i.e., 3.4 hours) of the planned activities without a medical certificate they may be prohibited from completing the course.

Course Content

- Theoretical perspectives: Contemporary interpersonal communication research and theory will be examined. The relationship of communication and social trends is also included in the course.
- Specific behavioral ways of relating: this will include some micro communication skills, for example, reflecting feelings, identifying themes and some more general macro skills, for example, engaging in dual perspectives and self-monitoring.
- Ways to analyze our interactions with others in order to increase our awareness and set goals to improve our communication.
- Common experiences of people in hospital:
 - the person who is anxious
 - the person who is sad, bereaved or depressed
 - the person who is confused
 - the person who is angry and hostile.

Assignment Details

1. Collage Activity

The collage is used to stimulate discussion among the class participants (students and faculty). It will help us as individuals to make meaning from the course concepts and it will help us to share those meanings with each other.

How to create the collage: Each week, some students will bring something to class (a picture, an article, a poem, a cartoon, an object) and add it to the collage. You need to "own" and document your contributions by including your name, a brief description of the contribution, and how it relates to the day's session, on the collage.

How we will use the collage: During each class session, we will spend some time discussing how the collage reflects the ideas under discussion in the class.

Grading

This activity is part of the marks allotted to participation (15%). You must make a minimum of 6 contributions to the collage throughout the course in order to receive the marks. You must also share the meaning of at least one of your collage contributions in the large group. It is your responsibility to keep track of your collage contributions and your participation on the form provided by the faculty. You will submit this record of your participation on November 13.

2. Essay on Your Observation/Analysis of Interactions

To be decided by students

The purpose of this essay is for you to demonstrate your awareness and understanding of:

- the multiple contexts in which interpersonal communication occurs;
- the verbal and non-verbal attitudes and skills in yourself and others that facilitate shared meaning;
- the verbal and non-verbal attitudes and behaviors in yourself and others that block shared meaning.

You will do this by describing and analyzing six (6) nurse-patient interactions that you participate in or observe during your clinical experience. If you have had interactive experience outside of your clinical experience that has had a significant impact on your understanding of interpersonal communication you may include it (only one) in the essay.

Description

Elements or dimensions of interpersonal communication (sometimes called interpersonal dynamics) that are important to examine include:

- the context of the interaction
- the goal(s) of the interaction
- verbal and non-verbal skills or blocks evident in the interaction
- the effect of the interaction on those involved in it

It is not necessary or desirable for you to provide detailed clinical descriptions or extensive dialogues from the interactions. Strive to condense your descriptions to the essential interpersonal elements.

Assignment Details (continued)

Analysis

Analyzing interactions may include:

- describing the interrelationships of the above elements;
- applying theories, principles or guidelines of interpersonal communication from the communication and/or nursing literature to the situations that you describe;
- describing different ways the participants could have behaved or interacted to improve the interaction or its outcome;
- identifying any themes or patterns in the interaction;
- identifying the non-literal messages in the communication;
- determining if your responses demonstrated an understanding of the patient's behavior (both verbal and non-verbal), perspective and/or situation;
- noting the effects of the participants' values or beliefs on the course of the interaction.

You cannot realistically write about all of these factors for each interaction. Therefore you will need to make some choices about how you develop your essay.

In order to do this assignment you will need to attend to your own and others' interactions with patients. I suggest that you keep a journal of suitable interactions and relevant literature from week to week. (You may want to include this in your NURS 2030 clinical journal.) This will ensure that you have plenty of interactions to choose from for your essay. It will also enable you to start writing the essay early in the term.

Due date: Monday, November 20, 12:00 noon.

You may negotiate an extension of the due date for reasonable cause with the course instructor before noon on Friday November 17. The consequence of submitting a paper after the due date (November 20 or a negotiated due date) is 5% per school day deduction for the essay. Students are advised to retain a copy (hard or soft copy) of their essay until one week after the end of exam week.

Note: If you are not taking a practicum course concurrently with this course, you must make an appointment by the third week of the term with the course instructor to discuss how you plan to observe and participate in nurse-patient interactions in order to write this essay.

Requirements for the Written Assignment

This paper is an 8–10 page academic essay. Please use APA style guidelines.* An abstract, visuals, running head and header are not necessary. Use first-level headings (section titles) only, that is, for the body of the essay and the references.

The essay must include an introduction that states the thesis and also orients the reader to the points to be made in the body of the essay. The essay must include a conclusion that summarizes the points you have presented in the body of the essay to support your thesis.

Please support your ideas in the body of the essay using the professional literature. You must use the required readings from the course. You must cite from at least one source. A marking scheme and guidelines will be discussed in class.

Assignment Details (continued)

Grading

Twenty percent (20%) of the grade will be allotted to language, grammar and mechanics (spelling and punctuation), citations and reference(s). Eighty percent (80%) of the grade will be allotted to composition, style and content.

* APA style guidelines (4th edition) for Reference citations in text are on pp. 168–174. Guidelines for the Reference list are on pp. 174–188. Also refer to the APA Style Guidelines distributed in Level 1.

3. Midterm Exam

To be decided by students

Your understanding of *Everyday encounters*, Chapters 1–6, and other course readings will be tested with an exam on Monday, October 2. *All* students will write the exam at 0830–0930. Location: Town Square A & B, SE6.
