

A POLYTECHNIC INSTITUTION

School of Health Sciences Program: Medical Radiography Option:

MRAD 3308 Radiobiology and Radiation Protection

Start Date:	Janu	ary, 2005		End Date:	April	, 2005	/
Total Hours:	See S	Schedule attached.		Term/Level:	3	Course Credits:	1.5
Hours/Week:	3	Lecture:	Lab:	Shop:		Seminar:	Other:
Prerequisites				MRAD 3308 is	s a Pre	requisite for:	
Course No.	Cou	rse Name		Course No.	Cours	se Name	
Anatomy and P Physics for Mee				None.			

Course Description

The first part of this course deals with the fundamental concepts of Radiobiology through a discussion of radiation interaction with tissue, radiosensitivity, and early and late effects of radiation.

In the second part of the course, radiation protection concepts are introduced. First, the principles of radiation protection and the establishment of dose limits are described. This is followed by a discussion of various methods used to not only estimate the dose to patients, but also to minimize radiation dose to both patients and personnel. Finally, the course concludes with equipment specifications and shielding guides for diagnostic x-ray installations.

Detailed Course Description

To provide students with a knowledge of radiation biology so that they can apply effective radiation protection measures to patients, personnel and members of the public; in meeting the entry to practice competencies of the CAMRT, for radiation, health and safety in radiology.

Evaluation

50%	Comments: A grade of 60% is required to pass this course.

Course Learning Outcomes/Competencies

Upon successful completion, the student will be able to:

- 1. define the term radiobiology and trace important historical events relating to the injury of humans exposed to radiation.
- 2. explain how radiation interacts with tissue with emphasis on photoelectric absorption and Compton effect.
- 3. explain two theories of biologic damage by radiation.
- 4. define the term "radiosensitivity" and state the law of Bergonie and Tribondeau.
- 5. describe the early effects of radiation.
- 6. describe the late effects of radiation, including; radiation effects on the embryo, fetus and child, based on the stages of development: pre-implantation, major organogenesis and growth stage.
- 7. describe stochastic and non-stochastic effects of low level radiation over an extended period of time with specific reference to radiology personnel.
- explain the fundamental principles of radiation protection for diagnostic radiology; time, shielding and distance.
- 9. describe current radiation protection standards, including; the triad of justification, optimization (ALARA) and dose limitation as well as the triad of time, shielding and distance.
- 10. state the dose limits for radiation workers and members of the public.
- 11. explain various methods used to estimate the dose to patients.
- 12. describe various methods for minimizing exposure of both patients and personnel to radiation.
- 13. identify equipment specifications for diagnostic radiology and explain how these specifications serve to protect patients and personnel from unnecessary radiation exposure.
- 14. explain the concept of radiation risk to the patient according to department radiation protection guidelines.

On successful completion of the above outcomes, you should be prepared to perform the following competencies as defined in the "Competency Profile" for radiographers, established by the CAMRT.

RADIATION HEALTH AND SAFETY

CRITICAL TASK B1 Protect the patient

- B1.1 Question female patients to ascertain possibility of pregnancy
- B1.2 Consult with the radiologist or physician in cases of suspected pregnancy
- B1.3 Adjust routine for radiography of pregnant women
- B1.4 Provide information regarding radiation exposure to the fetus
- B1.5 Use protective practices to reduce the risk of damaging effects of radiation in the diagnostic range
- B1.6 Collimate only to the area of interest to minimize patient dose
- B1.7 Select exposure factors consistent with optimal image quality and minimum radiation dose
- B1.8 Use addition filters as required
- B1.9 Monitor fluoroscopic exposure and note fluoroscopic time

CRITICAL TASK B2 Protect the technologist

- B2.1 Stand behind protective barriers
- B2.2 Wear lead protective apparel when remaining in the radiation area
- B2.3 Remain as far as possible from patient and source during exposure
- B2.4 Use position aids/immobilization devices to avoid having to hold the patient during the procedure
- B2.5 Direct x-ray towards primary barriers only

CRITICAL TASK B3 Protect others required to be present during the procedure

- B3.1 Advise accompanying females to leave the radiation area when pregnancy is known or suspected
- B3.1 Instruct people in the radiation area to maintain a safe distance and/or use radiation barriers during the exposure
- B3.3 Provide protection for people remaining with the patient during exposure

CRITICAL TASK B4 Protect others not required to be present during the procedure

- B4.1 Close the doors of the radiation area when in use
- B4.2 Instruct people to leave the vicinity during imaging procedure

CRITICAL TASK B5 Monitor personal radiation exposure

- B5.1 Wear radiation monitoring device
- B5.2 Check the accumulation of the radiation dose
- B5.3 Take appropriate action should readings exceed recommended standards

Verification

I verify that the content of this course outline is current.

nn Authoring Instructor

I verify that this course outline has been reviewed.

Program Head/Chief Instructor

I verify that this course outline complies with BCIT policy.

Dean/Associate Dean

an 04.

Date

Note: Should changes be required to the content of this course outline, students will be given reasonable notice.

Learning Resources

Required:

- Safety Code 20A: X-Ray Equipment in Medical Diagnosis, Part A, Health and Welfare Canada, 1999. This code can be downloaded from the website located at: http://www.hc-sc.gc.ca/ehp/ehd/catalogue/rpb_pubs/safety_code20a.pdf
- 2. Seeram, E., Radiation Protection, Lippincott, 1997.
- 3. MRAD 3308: Radiobiology and Radiation A Study Guide and Workbook.

Recommended:

- 1. Bushong, S., Radiologic Science for Technologists by Bushong, 7th Edition, C.V. Mosby, 2001.
- 2. Seeram, E., Rad. Tech's Guide to Radiation Protection, Blackwell Science, Inc., 2001.

(cont'd.)

Information for Students

(Information below can be adapted and supplemented as necessary.)

Assignments: Late assignments, lab reports or projects will not be accepted for marking. Assignments must be done on an individual basis unless otherwise specified by the instructor.

Makeup Tests, Exams or Quizzes: There will be no makeup tests, exams or quizzes. If you miss a test, exam or quiz, you will receive zero marks. Exceptions may be made for documented medical reasons or extenuating circumstances. In such a case, it is the responsibility of the student to inform the instructor immediately.

Ethics: BCIT assumes that all students attending the Institute will follow a high standard of ethics. Incidents of cheating or plagiarism may, therefore, result in a grade of zero for the assignment, quiz, test, exam, or project for all parties involved and/or expulsion from the course.

Attendance: The attendance policy as outlined in the current BCIT Calendar will be enforced. Attendance will be taken at the beginning of each session. Students not present at that time will be recorded as absent.

Illness: A doctor's note is required for any illness causing you to miss assignments, quizzes, tests, projects, or exam. At the discretion of the instructor, you may complete the work missed or have the work prorated.

Course Outline Changes: The material or schedule specified in this course outline may be changed by the instructor. If changes are required, they will be announced in class.

Assignment Details

To be discussed in class.

- There is one assignment in this course. It is based on a literature search and summary of one article from a journal of radiobiology/radiation protection/radiology/radiologic technology, that is related to any topic covered in this course.
- This assignment is worth 10%. There is absolutely no reason why you should not score full marks.

Schedule

Week	Material Covered	References
Term 3A		
1 Hour/Week	Predicted Order of Coverage	
1	Detailed Description/Explanation of the Course Outline Total Hours Prerequisites Course Description Course Goals Learning Outcomes CAMRT Competencies — Radiation Health and Safety Evaluation Learning Resources Assignment Description 	
2	 Module 1: Radiation Protection Foundations Rationale for Radiation Protection Radiation Protection Framework Exposure Factors in Radiology Patient and Technologist Exposure Radiation Protection Concepts Organizations and Reports Radiation Protection and the Technologist Essential Physics for Radiation Protection 	Review the topics listed in Module 1. Read Chapters 1 and 2 in the textbook by Euclid Seeram.
3	Module 1: Radiation Protection Foundations • Radiation Exposure < Sources of Exposure	Chapter 3 in Euclid Seeram's textbook.
4 & 5	 Module 2: Concepts of Radiobiology Definition of Radiobiology Sequence of Events Leading to Bioeffects Generalizations Human Responses to Ionizing Radiation History of Radiation Injury Radiosensitivity Dose-Response Relationships 	Chapter 4 by Travis in textbook by Euclid Seeram (relevant topics only).
