Course Description

During this part of the course the student will be introduced to Medical Terminology and to some of the basic physiological principles underlying disease processes. The main portion of the term will be spent on an in-depth study of those pathological conditions which specifically affect bone and identifying them as they appear radiographically.

Course Goals

(Upon successful completion of this course, the student will be able to:

1. correctly use terminology relevant to the study of disease.
2. explain the relationship between a disease and its effect on the body as a whole.
3. identify the signs and symptoms associated with disease processes.
4. plan changes in radiographic technique to best demonstrate the presence of disease processes.
5. describe the radiographic appearance of selected pathological conditions.
6. develop a plan for patient care during radiography based on the pathology involved.
7. identify a selected group of pathologies as they appear radiographically.

Evaluation

Final Examination	50%	The pass mark for all subjects in the Medical Radiography program is 60%.
