

A POLYTECHNIC INSTITUTION

School of Health Sciences

Program: Medical Radiography

Option:

**MRAD 2216****Radiographic Procedures 2**

---

<b>Start Date:</b>	September, 2004	<b>End Date:</b>	December, 2004
<b>Total Hours:</b>	63	<b>Total Weeks:</b>	7
<b>Hours/Week:</b>	9	<b>Lecture:</b>	4
		<b>Lab:</b>	5
<b>Term/Level:</b>	2	<b>Course Credits:</b>	4
<b>Shop:</b>		<b>Seminar:</b>	Other:
<b>Prerequisites</b>	<b>MRAD 2216 is a Prerequisite for:</b>		
	Successful completion of Level 1		
	Entry into Level 3		

---

**v Course Description (required)**

Positioning for radiographic procedures related to the urinary and digestive systems as well as vertebral column, hip and shoulder girdle radiography will be covered. Skills to evaluate the diagnostic and technical acceptability of the radiographs for the respective areas will also be examined. Methods for formulating technique changes for various exams and for the variations of the normal patient will be developed. Renal tomography will be discussed. Labs will reinforce theoretical components of the course.

**v Detailed Course Description (optional)**

The goals of this course are to provide students with the skills required to:

1. position patients for the views/projections being studied.
2. understand renal tomographic applications.
3. evaluate the diagnostic and technical acceptability of radiographs of areas being studied.
4. calculate technique changes and recognize variables of techniques for various exams and the variations of the normal patient.
5. produce specified radiographs using radiographic phantoms.

**v Evaluation**

Final Examination	40%	Comments: All labs and projects must be satisfactorily completed before a course mark will be given.
Midterm	30%	
Rad Eval Quizzes	10%	
Applied Lab	10%	
Positioning Lab Assignment	5%	
Positioning Lab	5%	
<b>TOTAL</b>	<b>100%</b>	(60% is required for a pass.)

**v Course Learning Outcomes/Competencies**

Upon successful completion, the student will be able to:

1. Define, describe and demonstrate beam directions, centring points and patient positioning relating to the radiography of the:
  - colon
  - vertebral column
  - shoulder girdle
  - hip girdle
  - urinary system
2. Describe required projections relating to radiographic examinations of the colon and urinary system.
3. Describe tomographic considerations for renal structures.
4. Demonstrate radiographic judgement, organizational and communication skills and radiographic competence while positioning a patient.
5. Evaluate radiographs for the studied areas for diagnostic acceptability based on:
  - a. inclusion of all required structures
  - b. demonstration of correct positioning
  - c. appropriate level of density demonstrated
6. Assess main contributing factors to the overall radiographic image quality based on the:
  - a. type of patient involved (body habitus, pathology, and limitation of movement)
  - b. appropriate technique factors required
  - c. acceptable processing methods used
7. Propose possible solutions to poor radiographic quality.
8. Calculate radiographic technique factors using the DuPont Bit System.
9. Outline technique chart adjustments to be made with respect to:
  - a. patient body habitus
  - b. patient pathology
  - c. patient age
  - d. specific equipment used (generators, imaging system, grids, etc.)

## CAMRT COMPETENCIES

On successful completion of the above outcomes, you should be prepared to perform the following competencies as defined in the "Competency Profile" for radiographers established by the CAMRT.

## RADIOGRAPHIC PROCEDURES 3

### Critical Task List

#### **A1 *Utilize the request for consultation***

- A1.1 Verify that examination is ordered by authorized professional
- A1.2 Verify the patient's means of transport
- A1.4 Correlate clinical information to the prescribed examination
- A1.5 Prioritize work
- A1.6 Plan the radiographic imaging procedure

#### **A2 *Prepare room for radiographic imaging procedures***

- A2.1 Clean the examination room and the equipment
- A2.2 Change the linen on the x-ray table
- A2.5 Obtain accessory imaging apparatus
- A2.6 Select the correct image receptor system (conventional vs digital)

#### **A3 *Prepare the patient***

- A3.1 Identify the patient
- A3.2 Verify clinical information with the patient or clinical staff
- A3.3 Ensure proper patient attire for the procedure
- A3.4 Confirm patient preparation
- A3.5 Remove all items that would compromise the quality of the image
- A3.6 Explain the procedure to the patient
- A3.7 Confirm that patient's consent is obtained before commencing the procedure
- A3.8 Take appropriate action if patient refuses procedure
- A3.9 Document patient's history of allergies when using contrast media
- A3.10 Record additional clinical information
- A3.11 Facilitate patient transport using good body mechanics

#### **A4 *Position the patient***

- A4.1 Plan the examination according to patient condition, to minimize patient discomfort
- A4.2 Demonstrate a knowledge of the imaging procedure
- A4.3 Inform the patient of the need to touch in order to position, prior to touching
- A4.4 Use touch for guidance, safety and comfort
- A4.5 Touch the patient at the anatomical landmark(s) required for positioning for the examination
- A4.6 Position the patient to demonstrate the required anatomical structures
- A4.7 Use immobilization and positioning aids as required
- A4.8 Direct the central ray to the correct anatomical landmark(s)
- A4.9 Align the imaging system with the required anatomical structures
- A4.10 Collimate to the area of interest only to maximize image quality
- A4.11 Instruct the patient as to breathing requirements
- A4.12 Use proper body mechanics when moving patient

**A5 Operate image equipment**

- A5.1 Select and use apparatus and accessory equipment safely
- A5.2 Perform the initial set-up of the equipment
- A5.4 Select the source-image distance
- A5.5 Use radiographic markers
- A5.6 Select the fastest film/screen/grid combination for optimum image quality appropriate for the examination
- A5.7 Select appropriate kV, mA and time or automatic exposure control parameters
- A5.8 Modify exposure factors on the basis of the patient's age, physique and condition
- A5.9 Take the exposure

**A6 Process images**

- A6.1 Imprint ID information
- A6.3 Unload the film cassette/magazine and process exposed film
- A6.4 Reload the cassette/magazine

**A7 Critique images and implement corrective measures**

- A7.1 Verify patient/film ID
- A7.2 Check for correct use and proper placement of markers
- A7.3 Identify anatomy and patient position on the image
- A7.4 Verify that required structures are demonstrated
- A7.5 Recognize film artifacts and take appropriate action
- A7.6 Determine whether the diagnostic quality of the image is acceptable
- A7.7 If image is unacceptable, determine the reason
- A7.10 Determine corrective action and repeat the procedure, if the image is unacceptable
- A7.12 Determine whether additional views are required

**A8 Complete post-procedural tasks**

- A8.1 Complete the examination within an appropriate time frame
- A8.3 Explain post-procedural activities to the appropriate person(s)
- A8.4 Dismiss the patient

**B1 Protect the patient**

- B1.1 Question female patients to ascertain possibility of pregnancy
- B1.5 Use protective practices to reduce the risk of damaging effects of radiation in the diagnostic range
- B1.6 Collimate only to the area of interest to minimize patient dose
- B1.7 Select exposure factors consistent with optimal image quality and minimum radiation dose

**B2 Protect the technologist**

- B2.1 Stand behind protective barriers
- B2.2 Wear lead protective apparel when remaining in the radiation area
- B2.3 Remain as far as possible from patient and source during exposure
- B2.4 Use positioning aids/immobilization devices to avoid having to hold the patient during the procedure
- B2.5 Direct x-ray towards primary barriers only

**B4 Protect others not required to be present during the procedure**

- B4.1 Close the doors of the radiation area when in use
- B4.2 Instruct people to leave the vicinity during imaging procedure

**B5 Monitor personal radiation exposure**

- B5.1 Wear radiation monitoring device

**C1 Ensure patient safety**

- C1.1 Confirm the patient's identity
- C1.2 Provide for the patient's safety needs
- C1.3 Use proper patient transfer techniques
- C1.4 Use stretcher and wheelchair locks and guardrails

**C2 Establish patient trust and confidence**

- C2.1 Dress in a professional manner
- C2.2 Introduce self to the patient
- C2.3 Explain the procedure at an appropriate level of understanding for the patient
- C2.4 Answer the patient's questions as fully as possible
- C2.5 Avoid inappropriate conversation in the presence of the patient
- C2.6 Use reassuring verbal and non-verbal communication techniques
- C2.8 Perform tasks in an organized and confident manner

**C3 Attend to the patient's trust and confidence**

- C3.1 Assess the patient's comfort needs
- C3.2 Assess and attend to the patient's physical needs
- C3.3 Move patient during procedure, with consideration to patient's physical condition
- C3.4 Provide proper care as necessary to meet the patient's comfort and physical needs
- C3.5 Provide for patient privacy

**C4 Perform patient care procedures**

- C4.1 Maintain a clean/aseptic work environment (medical asepsis)

**C5 Assist in the administration of contrast media and other drugs**

- C5.1 Obtain the patient's history to determine contraindications to contrast media
- C5.2 Inform the patient regarding the possible effects of contrast media and other drugs
- C5.3 Select and prepare contrast media and other drugs
- C5.8 Watch for changes in patient's status after the administration of contrast media and other drugs

**D1 Monitor and maintain processing equipment and facilities**

- D1.2 Prepare new chemicals
- D1.3 Perform start-up/shut-down procedures
- D1.7 Check solution levels
- D1.9 Inspect the safelight filter
- D1.10 Ensure that the dark room is light-tight
- D1.13 Perform sensitometry
- D1.14 Use sensitometry results to initiate corrective action

**D2 Monitor radiographic equipment**

- D2.1 Perform visual inspection of cables and equipment
- D2.2 Recognize improper functioning of imaging and accessory equipment/devices
- D2.4 Record and report equipment malfunctions to the appropriate person

**D3 Perform quality control tasks**

- D3.1 Perform quality control tests on imaging and accessory equipment
- D3.3 Record and maintain records/charts of all tests

**E2 Demonstrate professional behaviour**

- E2.1 Participate as a member of the health care team
- E2.2 Practice effective communication and conflict resolution skills
- E2.3 Respect values, beliefs and needs of others
- E2.4 Take responsibility for actions
- E2.5 Demonstrate professional deportment

**v Verification**

I verify that the content of this course outline is current.

Rita W. Laugel  
Authoring Instructor

30 August 2004  
Date

I verify that this course outline has been reviewed.

M. Delipiselli  
Program Head/Chief Instructor

Sept 1/04  
Date

I verify that this course outline complies with BCIT policy.

Alan Bell  
Dean/Associate Dean

1 September, 2004  
Date

Note: Should changes be required to the content of this course outline, students will be given reasonable notice.

### v Instructor(s)

Rita McLaughlin, ACR, CBI, MA Office Location: SW3-4084 Office Phone: 604-456-8181  
Office Hrs.: 8:30-16:30 E-mail: rita\_mclaughlin@bcit.ca  
and by appointment Address:

### v Learning Resources

#### *Required:*

1. MRAD 2216 Radiographic Procedures 2 Manual.
2. "Merrill's Atlas of Radiographic Positions and Radiologic Procedures," Phillip W. Ballinger (10th Edition). Vol. 1, 2 and 3 (2003).
3. "Radiographic Critique" Kathy McQuillen-Martensen (1996).

#### *Recommended:*

1. "Skeletal Anatomy" — Byron.
2. "Joy of Sectioning" — Dowdell.
3. "Textbook of Radiographic Positioning and Related Anatomy" — Bontrager.

### v Information for Students

*(Information below can be adapted and supplemented as necessary.)*

**Assignments:** Late assignments, lab reports or projects will **not** be accepted for marking. Assignments must be done on an individual basis unless otherwise specified by the instructor.

**Makeup Tests, Exams or Quizzes:** There will be **no** makeup tests, exams or quizzes. If you miss a test, exam or quiz, you will receive zero marks. Exceptions may be made for **documented** medical reasons or extenuating circumstances. In such a case, it is the responsibility of the student to inform the instructor **immediately**.

**Ethics:** BCIT assumes that all students attending the Institute will follow a high standard of ethics. Incidents of cheating or plagiarism may, therefore, result in a grade of zero for the assignment, quiz, test, exam, or project for all parties involved and/or expulsion from the course.

**Attendance:** The attendance policy as outlined in the current BCIT Calendar will be enforced. Attendance will be taken at the beginning of each session. Students not present at that time will be recorded as absent.

**Illness:** A doctor's note is required for any illness causing you to miss assignments, quizzes, tests, projects, or exam. At the discretion of the instructor, you may complete the work missed or have the work prorated.

**Attempts:** Students must successfully complete a course within a maximum of three attempts at the course. Students with two attempts in a single course will be allowed to repeat the course only upon special written permission from the Associate Dean. Students who have not successfully completed a course within three attempts will not be eligible to graduate from the appropriate program.

**Course Outline Changes:** The material or schedule specified in this course outline may be changed by the instructor. If changes are required, they will be announced in class.

## v Information for Students (cont'd.)

### Radiographic Evaluation Quizzes

There will be a Rad Eval quiz each week in the film critique labs (Room 4060). In addition to ensuring comprehension of material, the objective of these quizzes is to encourage peer coaching and to promote confidence in your abilities. These are desirable skills in the workplace.

Persons participating in the Rad Eval quiz will be randomly selected each week. The topic will be from the area studied the previous week. Persons not selected for the weekly quiz may be asked to prepare an oral presentation.

In Term 2, the quizzes will be done with partners. The procedure will be as follows:

- During the lab, you will be given 5 minutes to critique a radiograph using the 10 point radiographic evaluation technique and form.
- When you have finished critiquing your radiograph, a partner will be assigned to review the critique.
- Discuss the critique with your partner. You may choose to change the critique after the discussion, prior to handing in the Rad Eval form.
- The final decision on what is presented on the radiographic evaluation form rests with the originating partner.

Rad Eval Quizzes are worth 10% of the final grade

### Applied Lab

The lab will be done with an assigned partner. Partners and room assignments will be randomly selected on a weekly basis.

Assume that you are relieving another technologist for coffee. He/she has just developed the last film for a radiographic series on the patient on the table.

The following set-up will be used:

- machine/equipment will be on
- view/projection will be indicated on the radiographic evaluation form
- phantom will be on the table in the position that it was when the radiograph was taken
- technique that was used for the radiograph will be set on the control panel
- exposed cassette will be in position as it was exposed

You will evaluate the radiograph with your partner using the 10 point radiographic system.

Repeat the radiograph if not all criteria are met. Clinical notebooks may be used. **Only one repeat may be made.** While one person is developing the radiograph, the other person should shut the room down. Complete the 10 point radiographic evaluation for your repeat radiograph.

Students are responsible for ensuring rooms are left neat and tidy.

Radiographs and corresponding rad eval sheets are to be handed in at the end of the lab.

This lab is worth 10% of the final grade.

**v Positioning Lab Radiograph Assignment Details**

Each group will produce the specified radiograph(s) for the weekly positioning lab.

- Submit the film(s) and blue instruction sheet(s) on which you have printed your lab x-ray room number and the names of the group of students.
- The radiographs will be graded and returned to one of the students.
- Each student in the group will receive the same grade.
- Marks will be assigned for:
  1. positioning (phantom limitations noted)
  2. structures included
  3. density/contrast
  4. collimation
  5. markers and ID
  6. lack of artifacts
  7. filtration use
  8. correct film size (if applicable)
  9. timely submission
  10. thoroughness and professionalism of submission

### Schedule for Radiographic Procedures 2 — Fall 2004
