

MAR 31 1999

BRITISH COLUMBIA INSTITUTE OF TECHNOLOGY

Course Outline **Part A**

Operating Unit: Health Sciences

Program: Nursing

NURS 1000**Nursing and Health Issues 1**

Hours/Week:	3	Total Hours:	102	Term/Level:	1
Other:		Total Weeks:	17	Credits:	3.5

Prerequisites

Course No.	Course Name
------------	-------------

None	
------	--

NURS 1000 is a Prerequisite for:

Course No.	Course Name
------------	-------------

NURS 2000	Nursing and Health Issues 2
NURS 2030	Nursing Practicum 2

Course Goals

NURS 1000 fosters students' ability to explore health situations from a professional perspective by working collaboratively in small groups.

Course Description

Students will explore selected common health experiences in order to understand the impact it has on the individual, family, society and health care system. While developing their understanding, students will access information from a variety of sources including professionals in hospitals and in the community. A thorough exploration of the health situation will assist students in developing a professional context from which they can plan nursing care. The health experiences discussed in this course are related to sexually-transmitted diseases including HIV infection and cerebrovascular accidents (stroke).

The teaching/learning strategy used in this course is problem-based learning.

Course Format

Students will meet for three hours each week with a tutor to explore the situation and to identify learning needs. Students will do research independently then work to apply the knowledge to the situation when the group reconvenes. The group is required to function effectively so students will focus on both developing group process skills and learning content relevant to the situation. Students will complete two situations during the term. A simulated patient may be associated with the health situation.

Evaluation

- Group skills – Satisfactory ability to function effectively in the problem-based group is required for satisfactory course completion — 15% of mark.
 - A written assignment — group problem-solving situation — 15% of mark.
 - A written assignment related to a research article — 20% of mark.
 - A written problem-solving exam that tests problem-solving ability and application of course content — 25% of mark.
 - A multiple choice and short answer final exam that tests course content — 25% of mark.
-

Course Outcomes

The student will:

1. Develop a theoretical knowledge base related to nursing and specifically nursing's role in relation to selected common health experiences.
 2. Develop ability to accept a variety of perspectives related to the situation.
 3. Recognize contextual influences as relevant to the situation.
 4. Actively work in the group to develop a planned approach towards understanding the situation.
 5. Apply independent study material to the situation as planned and share information in the group that is clear, focused on the situation and defensible.
 6. Participate actively in the group so that the group functions productively.
 7. Develop ability to give feedback to other members of the group in a manner that facilitates the group goal.
 8. Establish relationships with group members that achieve the tasks of the group.
 9. Develop ability to monitor group process.
 10. Reflect on own growth in developing effective group skills.
-

Course Content

Students will work in learning partnerships to explore the following situations:

- Sexually Transmitted Diseases (STD) and HIV
- Cerebrovascular Accident

When exploring the above situations, students will consider the following concepts:

- Health
- Healing/Curing
- Illness
- Anxiety/Stress
- Coping
- Sexuality
- Nutrition
- Determinants of Health
- Group Process
- Growth and Development
- Culture
- Community Resources
- Spirituality (Spiritual Context)
- Physical context
- Care plan

In analyzing a situation the students may identify many other relevant content areas. These will be discussed within the context of the situation as time permits.

Process Threads Relevant to this Course

- Professionalism – Students will develop an understanding of nursing care that is required for safe practice. Also, they will need to be accountable and responsible to follow through with the work they have agreed to do and develop a knowledge base that is useful in practice.
- Communication – Working effectively in teams is a focus of this course. This includes establishing relationships with members, sharing ideas, clarifying thoughts, giving feedback and monitoring group functioning. The group will facilitate students' development of clear thinking and in communicating that thinking.
- Learning – Students will be required to take responsibility for their learning and for preparing material for their fellow classmates that is accurate and relevant.
- Leadership – Students will be assertive as the group works on the health situation. They will develop skills of group problem solving and consensus decision making as well as offer group process skills.
- Systematic Inquiry – Research or evidence that is brought to bear on the health situation may be questioned by the group, and the student will be helped to critique the data in the group situation.

The process of working in groups and bringing information to bear on a health situation for the purpose of understanding the situation more clearly promotes the development of a professional nurse. The purpose of understanding the situation may lead to developing a plan for approaching a simulated patient to try out some aspect of the professional role in nursing.

Text(s) and Equipment

Required:

1. Sims, L.K., D'Amico, D., Stiesmeyer, J.K., & Webster, J.A. (1995). *Health assessment in nursing*. Menlo Park, CA: Addison Wesley.
2. Snyder, M. (1992). *Independent nursing interventions* (2nd ed.). Albany, NY: Delmar.
3. Woods, D.R. (1994). *Problem-based learning: How to gain the most from PBL*. Hamilton, ON: Author.
4. **A fundamentals text is required.** One of the following texts is suggested:
 - Kerr, J.R. & Sirotnik, M.K. (Eds) (1997). *Canadian Fundamentals of Nursing*. St. Louis, Missouri: Mosby-Yearbook, Inc.
 - DuGas, B.W., & Knor, E.R. (1995). *Nursing foundations: A Canadian perspective*. Scarborough, ON: Appleton & Lange Canada.
5. **A medical-surgical text is required.** One of the following texts is suggested:
 - LeMone, P., & Burke, L.M. (1996). *Medical-surgical nursing: Critical thinking in client care*. Menlo Park, CA: Addison Wesley.
 - Smeltzer, S.C., & Bare, B.C. (1996). *Brunner & Suddarth's textbook of medical-surgical nursing* (8th ed.). Philadelphia: Lippincott.
6. **A nursing/medical dictionary is required.** One of the following is suggested:
 - Anderson, K.N., Anderson, L.E., & Glanze, W.D. (1994). *Mosby's medical nursing and allied health dictionary* (4th ed.). St. Louis: Mosby.
 - Miller, B.F., & Keane, C.B. (1992). *Encyclopedia and dictionary of medicine, nursing and allied health* (5th ed.). Philadelphia: Saunders.
7. **A pharmacology handbook is required.**

Recommended:

American Psychological Association. (1994). *Publication manual of the American Psychological Association* (4th ed.). Washington, DC: Author. This text is in the reference section of the library.

Course Notes (Policies and Procedures)

1. Students are encouraged to identify individual learning needs that may be met in this course. Please talk with the tutor to see how this might be accomplished.
 2. During the first class, the evaluation methods will be discussed.
 3. Students will participate in a verbal review of the course at midterm and a written review at the end of the term. This review will include a discussion of teaching methods, resources and course structure. The midterm review is aimed at meeting the needs of the students currently taking the course. The end of term review is aimed at modifying the course for subsequent students.
 4. Unforeseeable circumstances may necessitate the alteration of course content, sequencing, timing or evaluation. As much as possible, students will be given adequate notice of such changes.
-

Participation/Attendance

We believe that dialogue contributes to both thinking and learning. Therefore:

1. Attendance is required in this course. The different viewpoints and experiences shared during the session will expand the thinking of all participants. Also, students will be doing independent work to share with the group. This work is required for the group to accomplish its task and move on to other tasks. **Therefore, if students are absent for more than 10% of the planned activities without a medical reason, they may be prohibited from completing the course (see BCIT policy re attendance).**
-

Group Skills

1. The course outcomes describe the group skills that students will develop in the course. The Group Process Evaluation Tool describes specific behaviors and criteria against which students will be evaluated. This tool will be distributed during the first week of classes. Weekly verbal discussions of group skills will occur so that individuals can develop their skills. The student, their peers in the group and the instructor will assess each student's group skills based on the identified criteria in the evaluation tool and give feedback. A midterm summary of skills will be done to direct individual learning.
2. A final written assessment of each student's ability to function in the group will be done in week 17. Students will be expected to submit a written evaluation of their own and each of their peers' group skills. The written assessments of the student, their peers in the group and the instructor will be integrated to achieve the final assessment. If there is a major discrepancy between the student's self-assessment and their peers' and the instructor's assessments, the instructor's assessment will take priority. In such a case, the student will meet with the tutor to discuss the discrepancy and the final assessment of group skills.
3. It is the instructor's responsibility to make the final decision about a student's group skills mark.
4. A passing grade in group skills is achieved by:
 - obtaining a minimum of 50% in group skills evaluation.
 - acting as chairperson for the group at least once.
 - presenting a research article to the group.
5. **All students must achieve a passing grade in group skills to pass the course.**

Written Assignment — Group Problem-Solving Situation

1. The purpose of this assignment is to give students the opportunity to obtain feedback and marks for the group problem-solving process.
2. The group assignment is worth 15% of the course mark.
3. The assignment will be completed in class during week 8.
4. Each group will be given 1.5 hours to complete the group assignment.
5. One copy of the group's completed assignment will be handed in to the instructor at the end of the allotted time for marking.
6. Each person in the group will receive the same mark.

Assignment Details

1. Each group will be presented with a health situation. As a group students will develop a list of 10 possible patient problems/concerns relevant to the situation.
2. For each of the 10 possible problems/concerns the group must identify the related concept. In order to receive a mark for each issue identified there must be a minimum of five course concepts addressed by the ten issues. (10 marks)
3. For each of the ten problems/concerns listed the group must describe specific information or data that they would need to collect in order to validate each issue. (10 marks)

Written Assignment — Research Nursing Practice Paper

1. The purpose of the paper is to:
 - develop skill at using the library to find research articles related to a given topic.
 - introduce students to reading academic research articles.
 - develop the ability to reason and reflect.
 - develop writing skills.
2. The paper counts for 20% of the course mark. The entire paper is out of 27 marks. **It must be word processed.**
3. Papers are to be submitted **with the chosen research article** to your instructor's mail box in SE12-418 no later than 1600 hours on the due date. The due date will be announced during the first week of class.
4. 15% of the maximum achievable mark will be deducted for each school day the paper is late.
5. **The paper must be submitted to receive a mark for the course.**
6. Marks will be assigned for the content of the paper. The content of the paper refers to the thinking demonstrated by the student.

Assignment Details

1. Students will choose a research article related to a course concept or an issue that has arisen from one of the situations being studied. The research article will be the same one presented to their Nursing and Health Issues group as described on the group skills evaluation tool.

2. The paper will consist of four parts as well as an introduction and a conclusion and will answer the following questions:
 - A. **Introduction** (3 marks)
Present the main ideayou will be discussing and how you will organize your paper.
 - B. **What is the significance of the article?** (6 marks)
Give a brief summary of what the research findings are. (3)
Indicate who the findings would be significant to and why. Consider the broad context of health care. (3)
 - C. **Are the findings currently being used in practice?** (6 marks)
Indicate who was contacted to find out if the research findings are currently being used in practice. Include the names and positions of the persons contacted and why they were contacted. (2)
Describe how the research findings are being used and why OR
Describe why the research findings are not being used.
Provide evidence to support statements and ideas. (4)
 - D. **How will/did you share the research with health care professionals?** (5 marks)
Indicate who the research findings were shared with and why. Include health care professionals other than those contacted in B above. (2)
Describe how the writer shared the research findings. Be specific. (3)
 - E. **How do/will you apply the research to your own nursing practice?** (5 marks)
Indicate if the research findings are useful to you and why or why not. (2)
Describe how you are using or intend to use the research findings. If you do not intend to use the research expand on your rationale for why not. You will be given marks for a logical, clear argument. (3)
 - F. **Conclusion.** (2 marks)
Briefly summarize your work. (2)
3. When writing your paper keep in mind the following guidelines:
 - use your APA text as a resource.
 - answer the questions in #2 above in order.
 - use headings.
 - choose a relevant article that makes sense to you.
 - discuss your chosen article with your instructor prior to starting your paper.
 - in your paper use the language used in the instructions (2) above.
 - remember this is a technical paper not an English paper (you may want to discuss this idea with your instructor).
4. Use APA style when writing the paper. Consult APA style for spacing, margins, headings, indenting, paragraph structure, citing references, and title page. Instructors will provide feedback on your use of APA style. Other papers in the program assign marks for use of APA style, so this is a learning opportunity.
5. The body of the paper should be 4–5 pages long (excludes the title page). Instructors will read 6 pages maximum.

Examination Details

PROBLEM SOLVING EXAM – This is an individual exam, about 3 hours long, held during the PBL session of week 16.

1. The exams will be marked by the tutor then reviewed in the problem-based group during week 17.
2. **All students must achieve a 50% average between the problem-solving exam and the final exam in order to achieve credit for the course.**

Part A

Students will be presented with a health situation.

MIDTERM PROBLEM-SOLVING EXAM – This is an individual exam, about 2 hours long, held during the PBL session of week 8.

1. Students will be presented with a health situation.
 - In Part A, they will develop a list of the 10 probable issues/concerns/problems relevant to the situation. The issues/concerns/problems must relate to a minimum of 5 course concepts. For each issue identified students must describe specific information or data that they would need to collect to validate each issue. This part of the exam will count for 20 marks. Next students will choose a concept and generate a potential issue related to the concept. Students will then develop 4 possible nursing interventions to address the issue. This part of the exam will count for 5 marks. Then they will hand in this part of the exam to the tutor. The student will record on carbonless paper so that they may keep a copy of this part of the exam for the next part. Total marks for Part A are 20.

Part B

Question #1

- Students will be given additional patient data for the situation. They will list 5 issues/problems/concerns present in the data provided. For each issue the student will describe the evidence from the patient data that supports its inclusion. They will receive 1 mark for each relevant issue and 1 mark for the relevant data/evidence. In total this part of the exam will count for 10 marks.

Question #2

- Students will choose two issues and list 5 related nursing interventions with rationale for each issue that would be appropriate for the health situation. They will receive 2 marks for each intervention and related rationale. Therefore students will receive 0 or 2 marks for each intervention. In total this part of the exam will count for 20 marks.

Multiple Choice and Short Answer Final Exam

This exam will test course content through the use of multiple choice and short answer questions. There will be approximately 44 multiple choice questions and approximately 8 marks worth of short answer questions.

Students must achieve a 50% average between the problem-solving exam and the final exam in order to achieve credit for the course.
