Assessment: A research project

Tracking how student understanding and use of information develops over the course of their program.

learning outcomes

- match information sources with information needs
- construct search strategies that return relevant information
- critically evaluate information items to choose those best suited to information needs
- accurately attribute information items
- relate an information item to a broader context

example

Relevance paragraph:

"This article was very informative and relevant to my search topic. It contained all I needed to know regarding carburetors. This article concisely shows how these line up.

The article taught me all I needed to know about carburetors and I am happy with First Search."
